Congress of the United States  
Washington, DC 20515  

April 6, 2017

Hon. Tom Cole, Chair  
House Labor-HHS Subcommittee  
2467 Rayburn HOB  
Washington DC 20515

Hon. Rosa DeLauro, Ranking Member  
House Labor-HHS Subcommittee  
2413 Rayburn HOB  
Washington DC 20515

Dear Chairman Cole and Ranking Member DeLauro:

We are writing to respectfully request that your subcommittee include robust funding for the National Institutes of Health (NIH) to fund the Brain Research through Advancing Innovative Neurotechnologies (BRAIN) Initiative, or any initiative by a similar name.

Brain disorders such as Alzheimer's disease, Parkinson's disease, autism, epilepsy, schizophrenia, depression, and traumatic brain injury, are projected to be some of the most disabling and costly chronic diseases in the 21st century. One in three Americans will have a brain or nervous system disorder sometime in their life and the cost of treating neurological disorders is more than $500 billion each year. These statistics are grave, and regrettably we do not currently know enough about the brain to begin to meet this health and economic challenge. The BRAIN Initiative seeks to change that.

Led by an inter-disciplinary team of scientists, the BRAIN Initiative is a joint private-public effort. The Initiative will continue to foster development of technologies to reveal the underlying pathology of brain disorders – both neurological and psychiatric. By understanding and mapping the human brain, we will enter a new era of discoveries of treatments, cures, and methods of prevention of these disorders that afflict up to 50 million of our fellow Americans.

Robust funding of the NIH, and subsequently the BRAIN Initiative, will enable the United States to remain a leader of biomedical research and to address the devastation wrought by neurological disorders. Thank you for your attention to this important matter, and we look forward to the subcommittee’s effort to successfully fund this critical Initiative.

Sincerely,
