This example provides you with one possible way to identify interventions that may impact your patients’ quality of life scores.

Use quality improvement methodology to determine key drivers and then interventions for implementation.

Each provider will need to create an individualized intervention plan based on local key drivers.

This serves as an example and not necessarily what will work for every provider or practice.

For more information on identifying a quality improvement methodology, visit the AAN’s QI Toolkit at AAN.com/policy-and-guidelines/quality/quality-improvement/quality-toolkit-and-resources.

**Key Drivers**

- Resources and staffing needed for QOLIE-10 implementation
- Identification of ways to improve quality of life
- Patient engagement in improving quality of life
- Seizure burden

**Interventions**

- Implement screening in pre-visit questionnaire, patient portals, and electronic health records to obtain QOLIE-10-P information
- Train rooming and nursing staff to have screening completed
- Partner with social workers and psychology to screen and help implement a quality of life improvement plan
- Take action to screen and help implement a quality of life improvement plan
- Create tools and resources for patients to address and improve their quality of life
- Identify free resources and direct patients to appropriate resources such as Managing Epilepsy Well or Epilepsy Foundation
- Refer treatment-resistant patients to a comprehensive epilepsy center for consultation
- Offer neurostimulation or dietary therapy as treatments for appropriate treatment-resistant patients

**Aim**

Increase % of epilepsy patients >18 years of age whose most recent QOLIE-10-P score is maintained or improved from X to Y during two-year measurement period

**Seizure burden**

**Patient engagement in improving quality of life**

**Identification of ways to improve quality of life**

**Resources and staffing needed for QOLIE-10 implementation**

**IMPROVING QUALITY OF LIFE IN EPILEPSY**
