The American Academy of Neurology (AAN) is developing a quality measurement set for all neurology and is currently seeking work group members for this project.

This measure set differs from other AAN measure sets in that it is not focused on one specific condition or population. The intent will be to endorse existing or create new measures for cross cutting areas such as depression, safety, and function among others. A complete de novo set is not warranted as there are multiple measures currently existing on many of these topics that can be used or adapted to neurology populations.

Measures will be discussed and finalized through a series of virtual meetings that are one to two hours long. The dates and times of meetings will be determined once a work group is seated.

To be considered for the work group please complete the following and submit to Erin Lee at elee@aan.com by July 18, end of business:

- AAN Nomination and Conflict of Interest Form (All potential conflicts of interest are resolved in accordance with the AAN’s Policy on Conflicts of Interest as described in the 2014 AAN Measurement Manual)
- Current Curriculum Vitae (10 page maximum)
- A letter of interest highlighting quality improvement, guideline, quality measures, and/or leadership experience

Measure Development Work Group Responsibilities:
- Develop quality measures that address desired outcomes and gaps in care
- Ensure quality measures are of high quality, valid and implementable

Work Group members will:
- Attend an introductory webinar and virtual meetings
- Provide timely responses to requests for information, reviews, or edits
- Assist as needed with the development of process and outcome quality measures
- Give final work group approval after reviewing public comments

If you have any questions or concerns, please contact Erin Lee at 612-928-6020 or elee@aan.com. The work group leadership will review nominations and final decisions will be made by August 1. Not all who apply will be accepted.
